IT-FREISM – Free Elective 4: Information Storage Management
Activity 5

I. Perform the tasks below and submit a document with the required screenshots and information.

A. Cloud Server Setup
1. Sign up for a free-tier account on a cloud platform or service provider (e.g. AWS Free Tier, GCP Free Tier Account or Azure for Students). No need to sign up if you already have an account.
2. Configure and launch a virtual machine (e.g. AWS EC2 or Azure B1s).
3. Configure the machine as a web server and install the needed web service (e.g. Apache or Nginx).
4. Place a static or basic webpage (i.e. index.html file) with a message or output:
    Hello Cloud!
    <Name>
    <Date>
    IT-FREEISM – Free Elective 4: Information Storage Management
    7:30-9:00 PM TTh
5. Provide the URL (i.e. server's public IP address) for access verification of the webpage.

B. Cloud Platform – Actual Project Utilization
1. In the context of your respective Capstone Project, provide the URL (i.e. server's public IP address, actual domain or temporary domain) for access verification of the web component or module. If your capstone project consists only of a mobile component or module, provide only the screenshots for a specific cloud platform (e.g. Google Firebase, AWS Amplify or MS Azure Mobile Apps) utilized by the project.

C. Cloud Storage Setup
1. Sign up for a free-tier cloud storage or repository (e.g. Google Drive, OneDrive, Dropbox, GitHub, GitLab or Bitbucket). No need to sign up if you already have an account.
2. Place a resource object (e.g. a file or a folder) on the storage.
3. Assign a view-only or read-only access to that specific resource.
4. Provide the URL (shared link) for access verification of the resource.
